Re: Microporous Ion-Exchange Resins
and Process for Making Same.
Helf. 582-772, PM 554

Dear Jim:

As a result of new information, Dr. Rainer has supplied the rather extensive suggested additions and corrections for the draft application of June 14, 1972, which are enclosed. Because of close prior art, Dr. Rainer suggests a somewhat narrower wording for Claim 1 along the lines of the attached claim. The description of the basic resin may be carried over to the remaining claims. It seems to me that the present wording of Claim 2 Lines 2 and 3 might be misleading in indicating that the resin consists of PVC etc. rather than being derived from them. If you have further questions, you may wish to contact Dr. Rainer directly.

Very truly yours,

G. Esler Inskeep
Assistant Patent Officer
